

FINFO Functional Specification

1- Server requirement

- a. Apache
- b. PHP >= 5.4
- c. Mcrypt PHP Extension
- d. OpenSSL PHP Extension
- e. Mbstring PHP Extension
- f. Tokenizer PHP Extension
- g. MySQL >= 5.5

2- Browser Compatibilities (as of the development date)

- a. Desktops
 - i. Firefox - The latest two versions
 - ii. Chrome - The latest two versions
 - iii. Internet Explorer - The latest two versions
 - iv. Safari - The latest two versions
 - v. Opera - The latest two versions
 - vi. Microsoft Edge
- b. Tablets and Mobiles (iOS & Android)
 - i. Firefox - The latest two versions
 - ii. Chrome - The latest two versions (based on OS)
 - iii. Safari - The latest two versions (based on OS)
 - iv. Opera - The latest two versions of app

3- Framework and Library

- a. Laravel 5.1
- b. Bootstrap 3.3 (responsive)
- c. jQuery 1.11.3

4- Modules Deliverables

(All password format will be highly secure)

- a. Front End – FINFO Public Website
 - i. Home page, about us, contact us and so on (Dynamic pages)
 - ii. Registration
 - iii. Package selection / Multiple currencies
 - iv. Checkout and Payment gateway
 - v. Login page for FINFO admin or editor (With known url only, this will not show a link to public)
- b. Front End – Client Public Website
 - i. Home page and other dynamic pages
 - ii. Login page
 - iii. Forgot password
- c. Back End – FINFO
 - i. Dashboard
 - ii. User Management

- iii. Dynamic page and subpage
 - 1. Page or subpage will tie with a selected menu. This mean that when we create page we can choose which menu to display that page
 - 2. Ability to change the order of the page within each section
 - iv. Client list and detail
 - v. Billing - To view invoices Paid, Unpaid, Overdue and Cancelled
 - vi. Automated invoice generation - (This will be a backend process which will generate the invoice in a format provided by WW and save as pdf file or word file) Invoice will be automatically generated 1 week before expiry date of package subscription. (This should be a backend process which generate invoice and automatically send to client within our defined period). A cronjob will be setup and run everyday to check for any upcoming invoice
 - vii. Revenue/Profit
 - d. Back End - Client
 - i. Dashboard
 - ii. Website update (CMS)
 - 1. Page or subpage will tie with a selected menu. This means that when we create a page, we can choose which menu to display that page
 - 2. Ability to change the order of the page within each section
 - iii. Dynamic page and subpage
 - iv. User profile/ account information
 - v. Setting
 - vi. User Manager
 - vii. List of Modules subscribed to/ history
 - viii. My Invoices
 - ix. Payment Gateway option
 - x. Ability to upgrade package
 - xi. Ability to unsubscribe to package
 - e. Package features
 - i. Latest Financial Highlight
 - ii. Real time stock pricing and charts
 - iii. Financial annual report
 - iv. Press Release
 - v. Financial Results
 - vi. Webcast
 - vii. Presentations
 - viii. Announcements
 - ix. Investor Relations Calendar
 - x. Newsletter & Broadcast
 - xi. Email Alerts
 - xii. Media Access

5- Functional specifications for each module

a. Front End – FINFO Public Website

- i. Home page, about us, contact us and so on (Dynamic pages)

Footnote	Item Name	Notes
1	Layout Template	Will be responsive through phone and tablet.
2	Menu	There will be main menu and submenu
3	Content	Will be dynamic according to database

ii. Package selection / Multiple currencies

Footnote	Item Name	Notes
1	Package selection	There will be 3 packages for user to choose. (Bronze, Silver, Gold)
2	Package detail	Package detail will be generated from DB or config file.
3	Package click	When clicked, user will be routed to registration page with selected package.
4	Currency Display	There will be a dropdown for currency selection if there are more than one currency
5	Currency Configuration	We will use a config file for add or remove currency. Format will be provided later

iii. Registration

Footnote	Item Name	Notes
1	Package selection	This show display the package selected by user.
2	Account name	This will be an unique subdomain automatically creation (eg. account-name.finfo.com).
3	Fields	Check table below
4	After completed	User will be routed to checkout and payment page after register completed.

→ Field of Register

No.	Name of Field	Type	Mandatory	Minum	Maxim	Validation Required
1	account_name	text	Yes	6	20	check if account user does not exist/required. Validation should include subdomain format. Eg. cannot have space, all lowercase, no special character.
2	package_name	radio	Yes	1	1	check at least one package selected/required
4	first_name	text	Yes	5	50	required
5	last_name	text	Yes	5	50	required
6	email_address	email	Yes	5	50	required/valid email/unique. uniqueness here will check against account name and email address. so one email address should belong to one account name only
7	password	password	Yes	6	15	check if password meet the min
8	confirm_password	password	Yes	6	15	check if password meet the min and match the password field
9	term and condition	checkbox	Yes	1	1	check if user has checked the term and condition

iv. Checkout and Payment gateway

Footnote	Item Name	Notes
1	Check out page	Field: check table below
2	Payment gateway	Third party or APIs will be provided by WW later
3	After completion	User will be routed to thanks you page and message to check email for account verification
4	Account email verification	Will be sent after user completes the registration with a link to verify their email address.
5	After account verified	User will be routed to login page on user subdomain.
6	Invoice email notification	Will be sent to user with invoice in pdf file and user subscription detail.

→ **Field of Payment (data will be stored on third party service)**

No.	Name of Field	Type	Mandatory	Minimum	Maximum	Validation Required
1	payment_method	radio	Yes	1	1	required/at least one payment selected
2	creditcard_type	radio	Yes	1	1	required
3	creditcard_number	number	Yes	16	16	required / check if cc number format is valid
4	security_code	number	Yes	3	3	required
5	expiry_month	dropdown	Yes	1	1	required
6	expiry_year	dropdown	Yes	1	1	required
7	zip_code	text	Yes	1	10	required
8	country	dropdown	Yes	1	1	required

This will be the form field user needs to input, no payment details will be stored in our db. This will be used by third party service.

Ability to add a reserved subdomains list into the application. When a user is trying to register, you will need to check against this reserved subdomains list (eg. www, admin) and the existing account names (eg. company1, company2). This list can be added in a config or database table.

Registration process:

1. Fill up registration form (with 2 textfields to enter the account name of their choice. Preferred Account Name 1, Preferred Account Name 2). Upon entering the account name, system to do an AJAX verification on its availability. We would like to give client the 2 options for account name. Administrator will then approve 1 of them or neither or enter another account name
2. Once payment is being made, email verification will be sent to the email address under the Field of Register. At this point, site is not setup
3. Once email has been verified, FINFO will be notified of this new registration, prompting to do a manual approval so the account can approved and site can be setup. Another email will be sent out to client informing them their account is now under review for approval. At this point, site is not setup
4. Account name approval. FINFO will choose the preferred choice.
 - a. If FINFO approves the account name, site will be setup. Email will be sent to client that account has been approved, setup and the login details

- b. If FINFO rejects the account name, FINFO will get in touch with client offline to get a new account name. FINFO able to edit the account name and approves it (See 4a)

v. Login page for FINFO admin or editor

Footnote	Item Name	Notes
1	Layout Template	Will be responsive through phone and tablet.
2	Display	This page will display a login form for FINFO user only
3	Forgot password link	This link will route user to forgot password page.

→ **Field of Login**

No.	Name of Field	Type	Mandatory	Minimum	Maximum	Validation Required
1	email_address	text	Yes	5	50	required/valid email address/user existing in our app/ check user type again FINFO user only.
2	password	password	Yes	6	15	required

Search/Filter

Client Name	<input type="text"/>	Invoice Date	<input type="text"/>
Line Item Description	<input type="text"/>	Due Date	<input type="text"/>
Payment Method	Any	Date Paid	<input type="text"/>
Status	Any	Total Due	From <input type="text"/> To <input type="text"/>

Search

5438 Records Found, Page 1 of 109

Jump to Page: 1 Go

	Invoice #	Client Name	Invoice Date	Due Date ▼	Total	Payment Method	Status	
<input type="checkbox"/>	5439	Joseph Zeigler	20/08/2015	20/08/2015	\$28.95 USD	PayPal	Unpaid	 
<input type="checkbox"/>	5435	Demo User	18/06/2015	02/07/2015	\$0.00 USD	PayPal	Cancelled	 
<input type="checkbox"/>	5437	Victoria Burton	24/06/2015	24/06/2015	\$19.95 USD	Credit Card	Collections	 
<input type="checkbox"/>	5436	Joe Smith	18/06/2015	18/06/2015	\$17.90 USD		Unpaid	 
<input type="checkbox"/>	5431	Demo User	16/06/2015	16/06/2015	\$422.65 USD	SagePay	Unpaid	 

- Payment are made prior to approval, hence they are not orders as client has already made payment
- FINFO can just proceed to view invoices
- Under invoices, FINFO can view invoices via paid, unpaid, overdue, cancelled
- If client doesn't pay for their renewal in time, see below:
 - Client can still login to the backend and continue to do updates (so they can still proceed to make payment after the due date)
 - Site is not accessible and instead a message will be displayed
- Auto-renewal by default
- Payment is done monthly, default monthly payments are deducted unless the user goes to their profile and either unsubscribes or upgrades
- For auto renew, notification email will still be sent 1 week in advance to inform that \$<amount> will be deducted from their account on <date>
- If auto renew is not selected, an email with invoice will be sent 1 week in advance and an email notification reminder 3 days prior to due date, if no payment is made yet
- When payment is made, a receipt will be generated and email to client
- Invoice number format: YYYY-MM-X (X=sequential number). Example: 2015-09-1

→ Field of Invoices

1	Layout	will be responsive in phone and tablet.
2	Press releases list	This page will display a list of press releases uploaded by client order by date descending with pagination. User will be able to filter by month & year
3	Click on each press release	When click on each release, document file will be downloaded.

v. Financial Results (Archived)

1. Back End

Footnote	Item Name	Notes
1	Process	after new quarter of financial has input, the old financial will move to archived table.

2. Front End

Footnote	Item Name	Notes
1	Display	this will be display in financial highlight. This will display the archived financial highlights

vi. Webcast

1. Back End

Footnote	Item Name	Notes
1	Layout	will be responsive in phone and tablet.
2	Create/Edit/Delete	Client will be able to select a quarter and year, webcast url and captions.
3	List/ search/ filter	Client will be able to see a record listing, client will also be able to search and filter record base on different criteria <ul style="list-style-type: none"> - filter by quarter/ year - search by caption, url

→ Field of Webcast

No.	Name of Field	Type	Mandatory	Minimum	Maximum	Validation Required
1	quarter	dropdown	Yes	1	1	required
2	year	dropdown	Yes	1	1	required
3	url	text	Yes	5	250	required / check if url format is valid.
4	caption	text	Yes	5	100	required
5	publish					option to publish and datetime

2. Front End

Footnote	Item Name	Notes
1	Layout	will be responsive in phone and tablet.
2	Display	This will tie to a financial result of a particular quarter and year.

vii. Presentations

1. Back End

Footnote	Item Name	Notes
1	Layout	will be responsive in phone and tablet.
2	Create/Edit/Delete	Client will be able to select a quarter and year, upload presentation in pdf format (Max 3MB)
3	List/ search/ filter	Client will be able to see a record listing, client will also be able to search and filter record base on different criteria

→ Field of Presentations

No.	Name of Field	Type	Mandatory	Minimum	Maximum	Validation Required
1	quarter	dropdown	Yes	1	1	required
2	year	dropdown	Yes	1	1	required
3	upload	file	Yes	1	1	required / check if file has been selected and file size is below 3MB (pdf, ppt, pptx)
4	publish					option to publish and datetime

2. Front End

Footnote	Item Name	Notes
1	Layout	will be responsive in phone and tablet.
2	Display	This will tie to a financial result of a particular quarter and year.

viii. Announcements

1. Back End

Footnote	Item Name	Notes
1	Layout	will be responsive in phone and tablet.
2	Create/Edit/Delete	Client will be able to select a quarter and year, announcement date, title and upload announcement document in pdf format (Max 3MB)
3	List/ search/ filter	Client will be able to see a record listing, client will also be able to search and filter record base on different criteria - filter by year, quarter - search by title, date

→ Field of Announcements

No.	Name of Field	Type	Mandatory	Minimum	Maximum	Validation Required
1	quarter	dropdown	Yes	1	1	required
2	year	dropdown	Yes	1	1	required
3	title	text	Yes	5	50	required
4	date	datepicker	Yes	1	1	required / check if date is valid
5	upload	file	Yes	1	1	required / check if file has been selected and file size is below 3MB (only pdf)
6	publish					option to publish and datetime

2. Front End

Footnote	Item Name	Notes
1	Layout	will be responsive in phone and tablet.
2	Display	This will tie to a financial result of a particular quarter and year.
3	Search/ Filter	User will be able to search and filter in different year - filter by year, quarter - search by title, date

4	Click on announcement	Document will be downloaded when user click on link
---	-----------------------	---

ix. Investor Relations Calendar

1. Back End

Footnote	Item Name	Notes
1	Layout	will be responsive in phone and tablet.
2	Create/Edit/Delete	Client will be able to input Event title and select event date (past and future)
3	List/ search/ filter	Client will be able to see a record listing, client will also be able to search event by date or title

→ Field of Investor Relations Calendar

No.	Name of Field	Type	Mandatory	Minimum	Maximum	Validation Required
1	event_title	text	Yes	5	50	required
2	event_datetime	datetimepicker	Yes	1	1	required/ check if date is valid
3	publish					option to publish and datetime

2. Front End

Footnote	Item Name	Notes
1	Layout	will be responsive in phone and tablet.
2	Display	This will display a list of event order by date descending

x. Newsletter & Broadcast

1. Back End

There will be a cap on the number of broadcasts sent yearly (per client/account) and the number of recipients per each broadcast. (Eg. 12 broadcasts/year & 2500 recipients/broadcast). Per year is referring to the duration of the subscription. Create a setting on the FINFO backend to be able to change these values. Eg. <textfield> broadcasts/year, <textfield> recipients/broadcast

Footnote	Item Name	Notes
1	Layout	will be responsive in phone and tablet.
2	Create/Edit/Delete	Client will be able to: <ul style="list-style-type: none"> - Choose between predefined template or upload pdf - Set schedule for broadcast in advance
3	List/ search/ filter	Client will be able to see a record listing, client will also be able to search newsletter by date or title
4	Email Seed list	Client will be able to add or remove email from testing list.
5	Send test	Client will be able to send out a test broadcast to the seed list to preview. Use the

		SMTP when sending the seed list (do not use the email service provider). Prefix "<PREVIEW> " in the email subject. Eg. Subject: September Newsletter,when sending out the test email, subject should be showing "<PREVIEW> September Newsletter"
6	Process	After newsletter created and schedule to send out set, there will be a background process running and check if the schedule meet the current time. This newsletter will send out to all users who have subscribed to newsletter.
7	Report	This will implement with Email service provider to get number of read, unread, bounce.

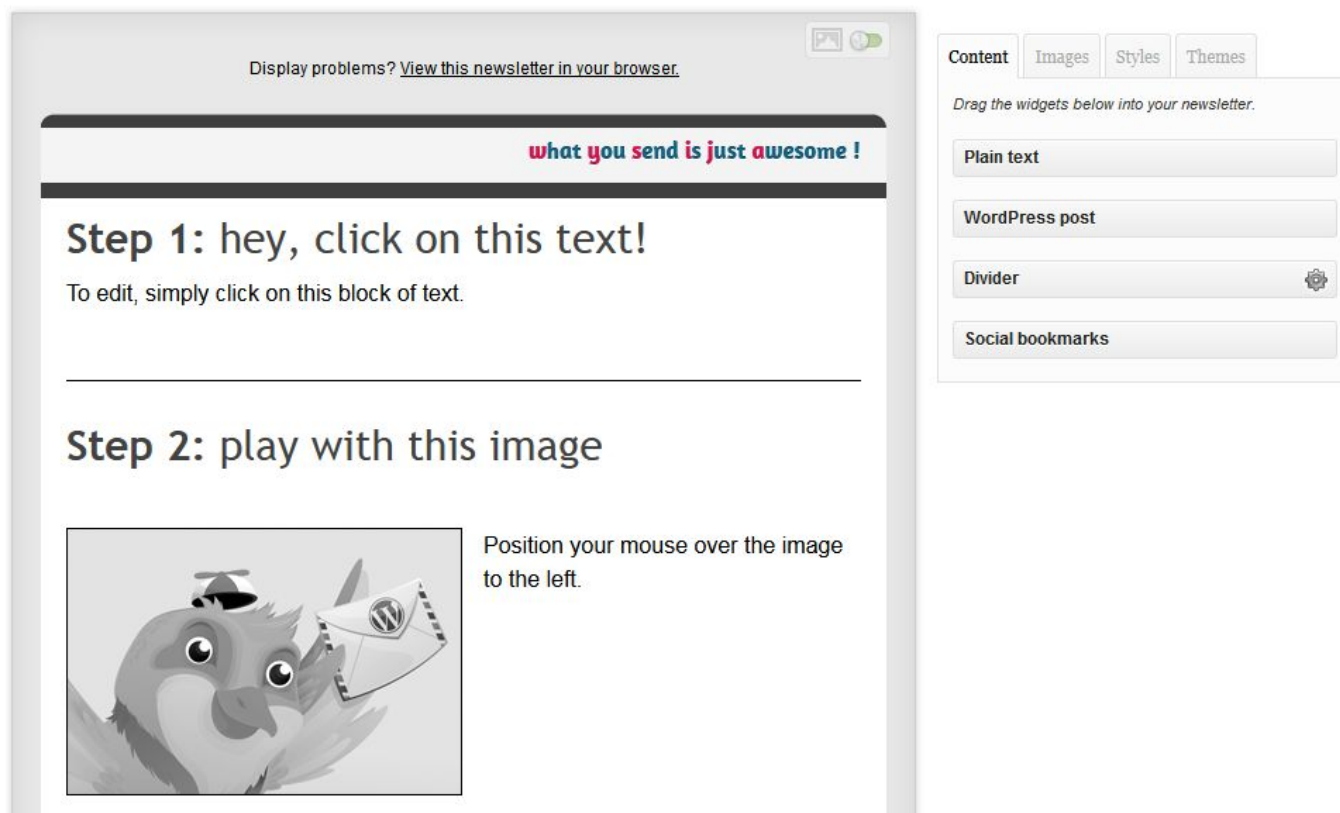

→ **Field of Newsletter create/edit page**

No.	Name of Field	Type	Mandatory	Minimum	Maximum	Validation Required
1	newsletter_type	radio	Yes	1	1	required - type1: pdf file - type2: a predefined template where client can fill the information into the template
2	predefined_template	template	Yes	1	1	check if fields in predefined template are valid (predefined template is a template we create as simple and leave some textbox or image for user to input)
3	upload	file	Yes	1	1	require if newsletter type is pdf file ,size (less than 3MB)
4	subject	text	Yes	5	50	require/ this will send to user email
5	email group list	checkbox	Yes	1	all	require at least 1 selected
6	sender_email	text	Yes	5	50	require/ check if valid email
7	reply_to_name	text	Yes	2	20	require
8	reply_to_email	text	Yes	5	50	require / check if valid email
9	schedule_it	checkbox	No			this is an optional feature which client can set a schedule to send out the newsletter. check this field will display broadcast form.
10	publish					option to publish and datetime

→ **Field of Broadcast Settings**

Display the remaining number of broadcasts for the rest of the year. If the number of broadcasts has reached the limit, display a message and disable them from creating new broadcasts

No.	Name of Field	Type	Mandatory	Minimum	Maximum	Validation Required
1	status	dropdown	Yes	1	1	required (draft, live)
2	broadcast_date	datepicker	Yes	1	1	required/ check if date is valid
3	broadcast_time	timepicker	Yes	1	1	required/ check if time is valid

2. Front End

Footnote	Item Name	Notes
1	Email layout	This will be a email layout from a predefined template or a link to a pdf file.
2	Unsubscribe	User will be able to unsubscribe newsletter from their received email.

xi. Email Alerts (Subscription tool)

1. Back End

Option to import existing list and which categories they belong to into the system CSV file format will provide for sample.

A scheduler/cron job will run on a daily basis (once a day). Eg. scheduler runs at 12:01am on 17-Sep-2015, it will retrieve all the new data (excluding Newsletter) created and published from 16-Sep-2015 12:00am to before 17-Sep-2015 12:00am.

Subscribers will only receive 1 email containing all the links to the various content.

See below for example:

Subscriber A is subscribed to Annual Report and Press Release.

Subscriber B is subscribed to Press Release, Announcements and Investor Relations Calendar.

Subscriber C is subscribed to Announcements.

When scheduler runs at 12:01am on 17-Sep-2015, and there's new data for Annual Report, Press Releases and Investor Relations Calendar. These data are created and published from 16-Sep-2015 12:00am to before 17-Sep-2015 12:00am.

In the above example:

Subscriber A will receive email alerts containing Annual Report and Press Release links.

Subscriber B will receive email alerts containing Press Release and Investor Relations links.

Subscriber C will not receive any email.

Footnote	Item Name	Notes
1	Layout	will be responsive in phone and tablet.
2	Manage (Create, Edit, Delete)	Client will be able to manage the list of subscribers.
3	List/ search/ filter	Client will be able to see a record listing, client will also be able to search event by date or title - filter by category - search by name / email address
4	Export	Client will be able to export the list of subscribers into excel format (CSV)

→ Field of Email back end

No.	Name of Field	Type	Mandatory	Minimum	Maximum	Validation Required
1	name	text	Yes	5	50	required
2	email_address	text	Yes	5	50	required/ check if it is a valid email
3	categories	checkbox	Yes	1	all	check if category at least checked one

2. Front End

Footnote	Item Name	Notes
1	Layout	will be responsive in phone and tablet.
2	Subscription page	This page will display a form with name, email and a list of categories in checkbox format
3	Captcha	User will be required to enter a correct captcha value before process a subscription
4	Process	<ul style="list-style-type: none">- check if email already exist in subscription table- if exist update new subscription category- if not exist create new subscription record with selected category
